Recruit Rocket 1.0.0

Quick start. About 5 minutes from install to your first results.

What you need

- A Claude Pro or Max plan.
- The Claude desktop app, with Cowork.
- A folder on your computer for your job search.
- Your resume (Word or PDF), or your LinkedIn PDF.
- Optional but recommended: the Gmail connector, so it can find your job alerts and skip jobs you already applied to.

1. Install in 3 clicks

1. In the Claude desktop app, click **Customize** (in some versions, **Settings**).
2. Click **Skills**.
3. Click **Upload skill** and pick **recruit-rocket.zip** from your purchase email. Leave it zipped. If you see an on and off switch, turn it on.

2. Make a folder

Make a new folder on your computer, for example **Job Search** in Documents. Put your resume in it. Switch to **Cowork** in the Claude app and pick that folder when it asks.

3. Type "Set me up"

Attach your resume and type:

> **Set me up with Recruit Rocket. I am job hunting in Columbus, Ohio, United States.**

Use your own city and country. Click **Allow** when Claude asks. You answer 3 quick questions (most are one click), and in a few minutes you see your first results: top job picks, hiring signals, and recruiters running searches. You pick which ones get a full package: a tailored resume, a one-page stat sheet, and an outreach email.

Every day after that

Say **"What should I do today?"** Have a job in mind? Paste it and say **"Score my resume against this job."**

Recruit Rocket writes drafts only. You review and send everything yourself. Your files stay in your folder. Single-user license: see LICENSE in the zip.
